By Matt Sailor FlowDoku is a Sudoku style Windows Phone 8 puzzle game. Instead of aligning numbers in a particular sequence, FlowDoku presents you with a series of squares, triangles, diamonds, and colored circles that you'll need to sort. The game has over two hundred puzzles to solve spanning five difficulty levels and four sizes Puzzle. FlowDoku has a simple design, easy user interface and challenging puzzles. Even easy puzzles can be on the challenging side. FlowDoku makes a good first impression and is an attractive Windows Phone puzzle game. From the FlowDoku main menu you will find options to play the game, view the information screens (help, statistics, credits, etc.) and access the game settings. The settings cover the sound/music on or off, as well as a help setting that will highlight solution errors. FlowDoku also offers an option between a light and dark theme in the settings. As you launch a new game you'll have to make some decisions before jumping into the game. FlowDoku has four puzzle sizes; 6x6, 8x8, 9x9 and 12x12. From there you choose your difficulty level ranging from very easy to bad depending on the size of the puzzle. The game is quite simple in that you have a chain of shapes set at the bottom of the game board. Each row, column, and box on the game board must include these shapes. In each box, matching shapes must be side by side, but with rows and columns that do not. If you have enabled the Show configuration errors option, errors in columns or rows are highlighted. As for scoring, puzzles are basically pass/fail with FlowDoku, but you have a game timer to record how fast you can solve things. If situations arise and you have to exit a game before solving the puzzle, FlowDoku will save your progress so you can collect things later. FlowDoku has over two hundred puzzles with the free version to keep you busy. When you exhaust those puzzles, you can use gems that are earned through the game (or purchased in-app) to unlock additional levels. In addition, if you want to skip the gem path, you can purchase the additional levels as well through in-app purchase. As a bonus, when you make an in-app purchase, advertising banners are removed. In-app purchases are located outside the main menu in the info option. Just choose the Disable Ads button bar to open the purchase options. Additional levels per difficulty run \$.99 for 200 puzzles per level and you can buy the entire puzzle collection add-on for \$5.99. All total, FlowDoku is an entertaining and challenging game. With the large number of puzzles included in the free game there are plenty of games to keep you busy. When you finish these levels, you can expand the number of levels with the gems you earn or through in-app purchases. If you are looking for a challenging puzzle game or just a new game to help you pass the time with, check out FlowDoku. The initial game is free, ad-supported and available for Windows Phone 8. You can pick up your copy of FlowDoku here in the Windows Phone Store. The WonderWord daily puzzle is located in WonderWord.com by clicking on Today's Puzzle. Sudoku, which comes from developer Babaroga and publisher Microsoft, is one of the first two free ad-supported games for Xbox Live. It is currently available only in the United States, although it is likely to debut on far land eventually as well. There are already a total of different sudoku games on Windows Phone. This version is certainly not definitive, but it is a very good way to get some free achievements. Head beyond rest for our full review. Sudoku is a type of logic puzzle that became popular in the mid-2000s. Let's hope everyone played it by now. If not, here's the Wikipedia description of the game: The goal is to fill a 9×9 grid with digits so that each column, row, and each of the nine 3×3 subgrids that make up the grid (also called boxes, blocks, regions, or subgrids) contains all digits from 1 to 9. The puzzle setter provides a partially completed grid, which typically has a unique solution. Completed puzzles are always a type of Latin square with an additional restriction on the content of individual regions. For example, the same unique integer may not appear twice in the same row or column on the 9x9 game board or in any of the nine 3x3 subregions of the 9x9 game board. Exciting, huh? Don't worry if it sounds confusing - the game has a simple training mode to help beginners collect the basics. Game Types Sudoku offers two ways to play: Classic and Lightning. Classic is the standard sudoku game. There are four levels of difficulty; The greater the difficulty, the more experience is given by completing each puzzle. There is no time limit, and longer puzzles can be saved and resumed later. Lightning is Babaroga's only Sudoku. Players start with a certain number of points, which they then constantly score down. If they reach zero, the game ends. Filling the boxes correctly adds some points, keeping the game running. Filling more than one box in a short time increases a score multiplier, helping even more. Due to the brief window to keep the score multiplier and its overall natural schedule, Lightning mode doesn't really give players much pen opportunity in numbers as they normally would when solving a puzzle. Still, the sense of urgency and additional XP will make Lightning more attractive than the classic for some players. Progress The puzzles here are randomly generated. I find random puzzles much less enjoyable than the 100 hand-designed puzzles included in each of the Nintendo Brain Age DS games. Still, Babaroga's Sudoku has a progression that unies the whole experience. The experience gained by completing (and even giving up) players helps players level up, increasing their ranks. It is similar to the system used in Gamechest. Logic Games, except that this game requires dramatically less grinding to reach the highest rank. I would say that the number of levels and experience required to win levels here is fair. Just. It also unlocks new power-ups and features associated with them. Turn on your brain Sudoku does not traditionally involve power-ups – after all, it started as a pen and paper game. But the power-ups add a unique flavor to this version and make it a little more accessible to less qualified players. The most useful power-ups are Pencil All (pencils in every possibility, which can save a lot of time), Lucky (fills a number in each 3 x 3 sub-grid), and the two that increase earned xp, XP Bonus and Gamble. At first players can only bring a single power-up in one game, but finally the number increases to five, I mean, three. Most power-ups require tokens to use, so you can't burn a million puzzles in a row with the best ones. Tokens reload over time and level them up instantly. Metro 'doku In the manufacture of the 'official' Windows Phone sudoku game, Babaroga adheres closely to the basic design of metro's user interface. Swiping left or right from the main menu switches between four different pages: Dashboard, Classic, Lightning, and Powerups. The dashboard is where you see your XP and progress to level up, as well as your Xbox Live avatar. Behind each page of the main menu is a picture in stock, which you can easily switch to a photo from the player library in the Help menu and options. The sudoku dashboard itself consists of a color grid that matches the user's phone settings on a black background. It's not super pretty, but it still looks better than some indie sudoku games. The pen and pencil can be easily toggled by tapping the large icon in the upper-right corner of the screen. When you tap on a box, it is selected and the numbers can be chosen from a row at the bottom of the screen. There are two problems with this approach. First, there is a small but noticeable delay between selecting a box and being able to select a number. This is more annoying in time-time Lightning mode, but there's really no excuse for late entry into a simple game like sudoku. Secondly, the numbers at the bottom are actually a little small and sometimes I ended up selecting the wrong one by mistake. It's not very difficult to enter numbers, but I would have preferred a better system. On the plus side, switching between pen and pencil is as simple as touching the large icon in the upper right corner of the screen. Silent but deadly Sudoku doesn't have any music, which is fine in such a game, especially a free one. The sound effects might be better though. The one who plays when completing a puzzle is particularly lame and noodles. Achievements Sudoku's 8 achievements are only worth a total of 50 GamerScore instead of the 200 standard. Since the game is free they're all easy to win, there's no reason to complain. The only achievement presented by any challenge is Gotta play 'em all, which requires players to complete a puzzle of each type in Classic and Lightning modes. Fortunately, power-ups make the most difficult puzzles quite manageable. General impression on Sudoku would be too light on the content and polished to be worth it. The entry delay, small impact boxes on the numbers and the unexplained loading times hold it back a little. But hey, I can forgive some rough edges in a free game that includes Xbox Live achievements, as long as it's fun. The puzzle solving game here definitely qualifies as fun. The leveling system and power-ups add a welcome addition and accessibility that some other sudoku games lack. I still hope that a perfect sudoku game will come to Windows Phone someday, but this version makes waiting much easier. Sudoku is only available in the U.S. Grab it here (Zune link) on the Marketplace. Market.
